Abstract (en)

[origin: WO2022195239A1] The invention relates to an immune cell comprising at least one Fc receptor on its surface, characterised in that a hybrid molecule is grafted at the Fc receptor, said hybrid molecule comprising at least one antibody Fc fragment covalently bound to at least one fibrin-derived peptide comprising one or more citrullyl residue(s). The present invention also relates to the uses of such a grafted cell and the method for producing same.
