Abstract (en)

[origin: WO2022194505A1] In order to simplify the creation of fluidic outflows in the widest possible range of application situations, the present document proposes a fluidic outflow unit (1) which is characterized in that fluid flows from various sources (3) are guided via respective flexible connection elements (6) to different discharge elements (4) and/or different flow control elements (5) of the outflow element (1), wherein the use of the flexible connection elements (6) ensures that the outflow unit (1) can be arranged in different installation spaces (14) inside an item of furniture (13) or a sanitary object, in such a way that the installation space (14) itself does not need to form a water duct.
