Abstract (en)

A utility vehicle (1) comprising: a vehicle frame (2); at least four wheels (3, 4) comprising left and right steerable wheels (3, 4) and left and right non-steerable wheels (3, 4); a hydraulic system (10) comprising: a left hydraulic cylinder (12L) coupling the left steerable wheel (3L, 4L) to the vehicle frame (2), a right hydraulic cylinder (12R) coupling the right steerable wheel (3R, 4R) to the vehicle frame (2), a left accumulator (14L) coupled to the left hydraulic cylinder (12L), a right accumulator (14R) coupled to the right hydraulic cylinder (12R), and a fluid supply (16) configured to supply fluid to either one of the left and right hydraulic cylinders (12L, 12R); a sensor configured to detect a right lateral slope condition wherein the right non-steerable wheel (4R) is positioned below the left non-steerable wheel (4L), and a control system operably coupled to the sensor and to the hydraulic system (10), the control system being configured to increase a downward pressure on the right steerable wheel (3R, 4R) when the right lateral slope condition is detected by controlling the fluid supply (16) to supply fluid to either one of the left and right hydraulic cylinders (12L, 12R).
