Abstract (en)

A measuring unit (11) of a household appliance (10) for collecting process parameters of the household appliance (10) comprises: a housing(12,13) an energy storage (18), a PCB electronics (19), and a measuring sensor (17). The measuring unit (11) is wirelessly connected with the household appliance (10) and the measuring sensor (17) is placed in a tunnel (15) which tunnel (15) extends into the housing (12, 13).The measuring unit is intended for use in a household appliance, especially washing machine or tumble dryer which is able to measure and collect the washing or drying parameters and are able to communicate wirelessly with the household appliance. Supervising the processes parameters helps to control the process and adjust the process parameters in order to achieve the best effectiveness of the household appliance.
