Abstract (en)

The present invention relates to a starter device (1) for cranking an internal combustion engine (2) having a driveshaft (4), which comprises an external toothed wheel (5), having a pinion shaft (6), which comprises a driveshaft receptacle (7), in which the driveshaft (4) is slidably received, having a transmission device (8) equipped for transmitting a torque (29) from the driveshaft (4) to the pinion shaft (6), which transmission device (8) comprises an internal toothed wheel (9), wherein the transmission device (8) and the pinion shaft (6) are jointly adjustable in an actuation movement (10) between an engaged position (11), in which the internal toothed wheel (9) and the external toothed wheel (5) engage into one another, and a disengaged basic position. It is substantial for the invention that the external toothed wheel (5) and the internal toothed wheel (9) have different toothed profiles. The invention relates in particular to an internal combustion engine (2) having such a starter device (1).
