Abstract (en)

The present invention generally relates to the field of skin care. More particularly, the invention relates to a cosmetic or therapeutic skin care composition comprising at least one skin-health promoting Staphylococcus strain that exerts an antimicrobial activity against pathogenic Cutibacterium acnes strains, while not affecting non-pathogenic Cutibacterium acnes strains. The invention also provides a method for treating or preventing acne, oily skin, or dry skin by applying the skin care composition of the invention to a skin area in need of treatment. The invention also relates to the use of a skin care composition of the invention for treating or preventing acne, oily skin, or dry skin.
