Abstract (en)

A rotary type dryer for the production of melamine comprising a rotating container comprising a cylindrical side wall and two end tube plates defining a cavity for containing the wet melamine, rotation means for rotating the container, insertion means for inserting the wet melamine into the cavity at a first end of the container, extraction means for extracting the dried melamine from the cavity at a second end of the container, and heating means in the form of tubes extending axially inside the cavity for heating the wet melamine contained in the cavity so as to dry it. The two tube plates comprise a first side facing inside the container, in particular towards the cavity, and a second side facing outside the container, in particular towards an external environment. The heating means comprise a first tube conducting water vapour from the second end to the first end and one or more second tubes conducting at least partly condensed water vapour and which are fluidly coupled outside the container to the first tube at the first end.
