Abstract (en)

[origin: WO2022208233A1] Left atrial auricle occluder (B) designed to be implanted into the left atrium (A) through the transcatheter route, characterised in that it consists of a self-expandable hyperelastic cage (1) configured to rest against the inner surface of the atrium (A) and provided with an end obturator (3) suitable to be retained frontally against the rim of the auricle (B), plugging it, by the elastic thrust exerted by the cage (1).
