Abstract (en)
[origin: WO2022203640A1] A system for nerve stimulation can include a neuromodulation device configured to be worn by a patient, the neuromodulation device configured for transcutaneous delivery of electrical stimulation to the tibial nerve; a mobile application executing on a mobile device in communication with the neuromodulation device, the mobile application configured to monitor the transcutaneous delivery of the electrical stimulation by the neuromodulation device and cause the mobile device to display information about the transcutaneous delivery of the electrical stimulation to the tibial nerve; and a web service in communication with the mobile application, the web service configured to transmit, to the mobile application, a treatment protocol and notifications defining the transcutaneous delivery of the electrical stimulation to the tibial nerve and receive, from the mobile application, the information about the transcutaneous delivery of the electrical stimulation to the tibial nerve.
