Abstract (en)
[origin: WO2022208114A1] A storage container is described comprising a receptacle for storing a fluid, the receptacle comprising a neck, the neck defining an opening through which the receptacle is fillable with, or emptiable of, a fluid. The receptacle also comprises a removable closure to seal the opening defined by the neck. The closure comprises a lip, wherein the lip is spaced away from the neck of the receptacle when the closure is secured to the neck. The receptacle also comprises a removable cap to close the storage container. The cap is shaped to fit over the closure. The cap comprises a catch configured to engage with the lip of the closure when the cap is removed, thereby allowing a user to engage the catch with the lip, apply a force to the lip, and lever the closure from the receptacle.
