Abstract (en)

[origin: WO2022200087A1] The invention relates to a process for preparing polyethers on the basis of cis-2,3-epoxybutane and trans-2,3-epoxybutane, comprising the steps a) reacting at least one starting compound (A) in the presence of a double metal cyanide catalyst (B) with 2,3-epoxybutane (C) and optionally further epoxide monomers (D) to form at least one polyether (E); and optionally b) reacting the at least one polyether (E) with at least one end-capping reagent (F) to form at least one end-capped polyether (G).
