Abstract (en)
[origin: WO2022207197A1] The invention relates to a single dose detergent unit, comprising a) a dimensionally stable gel body b) a cover substance in the form of a compressed moulded body which is different from the dimensionally stable gel and which partially covers the surface of the dimensionally stable gel body, wherein i) the compressed moulded body has an underside and an upper side which are connected to one another by an outer surface and ii) the compressed moulded body has at least one spatial diagonal, which connects two points lying opposite one another on the outer surface of the pressed moulded body, wherein the density of the pressed moulded body changes at least twice along the spatial diagonals in such a way that the density initially increases and subsequently decreases again. The invention also relates to a method for the production thereof and washing and cleaning methods using these washing agent portion units.
