Abstract (en)
[origin: WO2022208387A1] Connection set for a building construction and/or for a facade structure, comprising: a box-shaped receiving element which is configured for therein receiving an end part of a structural arm or connecting arm, wherein the box-shaped receiving element has a rear which is configured to be structurally connected with an upstanding wall of a building, as well as a front located opposite the rear, in which a passage is provided through which the structural arm or connecting arm can extend when the end part thereof is received in the receiving element; and a setting means for setting a position of the received end part relative to the receiving element.
