Abstract (en)

[origin: WO2022207724A1] This invention relates to a centrifugal pump with a two-part electronics housing in which at least two printed circuit boards, which are mounted spatially separated from one another, are mounted and at least one electrical connection is provided between the printed circuit boards, characterized in that the electrical connection is established by means of at least one rigid pin connector, the ends of which are connected or can be connected to suitable pin receptacles of the first and the second printed circuit board, wherein one or more assembly aids are provided in order to simplify the insertion of the pin connector into the pin receptacle of the first and/or the second printed circuit board.
