Abstract (en)

[origin: WO2022200332A1] The invention relates to a method for providing data from at least one machine-side data source (10) to at least one access point (20), comprising the steps of: establishing a data model (30), in which a predetermined definition and designation are stored for each of a plurality of machine-related parameters; storing the data model (30) in a data memory (50); establishing a first mapping (100) between source parameters of at least one machine-side data source (10) and machine-related parameters of the data model (30); and storing the first mapping (100) in a data memory (50).
