Abstract (en)  
[origin: WO2022207324A1] The invention relates to a method for providing context-dependent information about and/or paying for road sections (1) subject to a toll on a route that is used by a vehicle (2), wherein information relating to the use of at least one road section (1) subject to a toll is transmitted to a billing service provider (3) authorized to bill for the payment. The invention is characterized in that a current vehicle position and a current direction of travel of the vehicle (2) are compared with a digital road map in order to detect when the vehicle (2) approaches a road section (1) subject to a toll, and, by means of manual call-up or when it is detected that the vehicle (2) is approaching the road section (1) subject to a toll, information characterizing said road section is displayed on a display (4) in the vehicle (2), and/or an authorization to use the road section (1) subject to a toll is obtained from the billing service provider (3).
