Abstract (en)

[origin: WO2022256742A1] An apparatus including a controller including an automation definition circuit, an automation management circuit, and an automation command circuit. The automation definition circuit is structured to implement an automation user interface, provide at least one automation recipe to the user interface, and interpret an automation request in response to user communications with the automation user interface. The automation management circuit is structured to determine an automation description in response to the automation request. The automation command circuit structured to provide the automation description to a controller of a vehicle, wherein the controller of the vehicle is configured to implement an automated vehicle response, responsive to the automation description.
