Abstract (en)  
[origin: WO2022212779A1] A system and methods are disclosed for scoring audience responsiveness or exposure to viewing of paid content or advertising via connected television devices ("CTV") and/or over-the-top ("OTT") delivery mechanisms. The scoring system and method determines relevant data and creates and records the relevant data in an "Ad Exposure File" and an "Advertiser Outcome File" and at regular intervals compares them to identify matches via overlapping combinations of IP Address/DID, Timestamp (for confirmation of appropriate recency) and recording a conversion event to the "Exposed Household Record." of the appropriate household on the Ad Exposure File. The system and methods also provide an analytics index and optimization engines to provide effective ways of delivering advertising to households.
