Abstract (en)  
Cooking appliance including a casing (100, 200) including a cavity (S 1) and a tank chamber therein, and a door (300) for opening and closing the cavity (S 1). Furthermore, a water tank (450) may be discharged forwards of the casing (100, 200) through an entrance opening of the tank chamber. A panel unit (500) is disposed in front of the casing (100, 200) at a different height from the door (300). At this point, the panel unit (500) may be moved from a first position in which the panel unit (500) covers the entrance opening of the tank chamber to a second position in which the panel unit (500) opens the entrance opening of the tank chamber. The panel unit (500) may be moved from the first position to the second position as an upper end of the panel unit (500) is rotated to be moved downwards.
