Abstract (en)
The object of the invention is, among others, a tube (10) for a heat exchanger (1), comprising: a first tubular element (11) and at least one second tubular element (12) each tubular element (11, 12) comprising two juxtaposed longer walls (13) having essentially flat surface connected by a pair of shorter walls (14) to form a closed profile of each tubular element (11, 12), wherein the tube (10) further comprises at least one reversal element (15) configured to fluidly connect the first tubular element (11) and the second tubular element (12), wherein the tubular elements (11, 12) are arranged next to each other, so that the respective longer walls (13) are coplanar with respect to each-other, wherein the reversal element (15) is made integral with the tubular elements (11, 12).
