Abstract (en)

[origin: EP4319246A1] Provided in the embodiments of the present application are a synchronization method and apparatus, and a terminal device and a network device. The method comprises: a terminal device determining a first time interval, wherein the first time interval is used for the terminal device to acquire synchronization information; and the terminal device acquiring the synchronization information on the basis of the first time interval, wherein the synchronization information is used for transmitting a first physical channel or a signal.
