Abstract (en)
[origin: WO2022214532A1] The invention relates to an adapter device for delimiting an insertion depth of a cannula into a closure portion of a vial, comprising a tubular section extending longitudinally between a proximal end and a distal end and comprising a lumen, which is configured to receive the cannula, a plug section disposed at the distal end and which is configured for force and/or form-fitting plugging onto the closure portion of the vial, and having a functional section disposed at the proximal end which is configured to delimit a distal insertion depth of said cannula into the lumen.
