Abstract (en)
[origin: WO2022214283A1] The invention relates to a hand-held power tool (100), in particular a screwdriver, having: an elongate housing (110) in which a drive unit (220) having at least one drive motor (140) for driving a tool receptacle (120) is arranged, the tool receptacle (120) being designed to accommodate an insertion tool (190); and an activation unit (189) for activating the drive motor (140), the drive motor (140) being activated by the insertion tool (190) which is located in the tool receptacle (120) acting upon, in particular along a longitudinal axis (128) of the elongate housing (110), a workpiece to be worked on. The activation unit (189) has a first activation element (185) for activating the drive motor (140) at a first speed and a second activation element (195) for activating the drive motor (140) at a second speed, the first speed being less than the second speed.
