Abstract (en)

[origin: WO2022216215A1] Embodiments herein relate to, for example, a method performed by a first radio network node (12) for handling communication in a wireless communications network (1). The first radio network node (12) queries one or more second radio network nodes (16) whether respective second radio network node (16) comprises one or more resources to perform load sharing with. The first radio network node (12) receives a response from at least one second radio network node (16) indicating confirmation or rejection of load sharing; and performs an action based on the response.
