Abstract (en)
The present invention relates to a treatment module for creating a treated fluid mixture, particularly a hybrid multiphase carbon-hydrogen-oxygen fuel mixture, the treatment module comprising a fluid inlet and a fluid outlet; a reactor chamber fluidly connected to the fluid inlet and the fluid outlet; a cathode arranged within an electrode container and an anode which are arranged to provide an ionizing discharge, particularly a corona barrier discharge, between the anode and the cathode; wherein the treatment module is configured to receive a fluid via the fluid inlet, allowing the fluid to flow through the reactor chamber, and to release the a treated fluid via the fluid outlet, a system comprising the treatment module and a method for creating the fluid mixture.
