Abstract (en)
[origin: WO2022220684A1] The invention concerns a greenhouse (100) comprising a cultivation system for cultivating crops therein, and an air circulation system having a fan device (20) and an air distribution hose (10) which is in fluid connection with the fan device (20) and is configured to distribute air to be supplied by the fan device (20) over the crops to be cultivated in the cultivation system, wherein the air distribution hose is formed by at least two air channels (11) which are mutually separated over the length of the air distribution hose, and which lie adjacently of each other and are each configured to distribute air to be supplied by the fan device (20) over the crops to be cultivated in the cultivation system.
