Abstract (en)

[origin: WO2022218761A1] The invention relates to a pivotal fitting (1) comprises a bearing element (2) on which a first pivot lever (3) and a second pivot lever (4) are rotatably mounted about mutually spaced axes (5, 6). The first pivot lever (3) and the second pivot lever (4) engage into each other on the sides facing each other and can be rotated together, wherein the bearing element (2) is equipped with a movable locking element (14) which can be moved between a position which locks the first and the second pivot lever (3, 4) and a position which unlocks the first and second pivot lever (3, 4) and in which the pivot levers (3, 4) can be rotated, and the locking element (14) can be manually moved from the locking position into the unlocking position using an operating element (7). In this manner, a seat part and a backrest part can be pivotally mounted on a piece of furniture relative to each other via the pivotal fitting.
