Abstract (en)

[origin: WO2022218897A1] The invention relates to a method for the disinfection of liquids or gases, having the following method steps: generating a radiation barrier (200) in a disinfection chamber (100), introducing a gas flow and/or a liquid flow into the disinfection chamber (100), guiding the gas flow and/or liquid flow through a plurality of volume regions of the disinfection chamber (100), and discharging the gas flow and/or the liquid flow from the disinfection chamber (100), wherein the volume regions in the disinfection chamber (100) are formed by the radiation barrier (200), a chamber wall (110, 120) and a flow-directing face of a flow-directing element (150), and the volume regions are completely separated from one another by the chamber wall (110, 120), the radiation barrier (200) and the flow-directing face, and also to a device for carrying out the method.
