Abstract (en)

[origin: WO2022218993A1] The invention relates to a standalone device for charging/recharging electrical energy storage means of a vehicle, the standalone device extending vertically in a vertical direction A-A', the standalone device including a coupling system suitable for cooperating with a coupling module positioned on the ground, said coupling system comprising: - a connecting member (41) for electrically connecting the standalone device to the coupling module, and - moving means (43) for translating the connecting member (41) in the direction A-A' between a retracted position and an extended position, the connecting member (41) being closer to the ground in the extended position than in the retracted position.
