Abstract (en)

[origin: WO202218612A1] The invention relates to a device (12) for grouping packaging casings (10) comprising: a transport means (13) for transporting at least two packaging casings (10) in a transport direction (T), the transport means (13) comprising at least two sliders (14) for receiving, grouping and transporting the packaging casings (10) between the sliders (14), and the sliders (14) being adjustable, in particular movable, in the transport direction (T) and/or counter to the transport direction (T). In order to allow the packaging casings to be grouped more flexibly and effectively, according to the invention at least in some places the sliders (14) can be individually adjusted, in particular moved, in the transport direction (T) and/or counter to the transport direction (T) along a circumferential track (B). The invention also relates to a method for grouping packaging casings (10). Figure 2 is intended for the publication of the abstract.
