Abstract (en)

[origin: WO2022218513A1] The invention relates to a support device (1), in particular a shelf track, for supporting a module (10), in particular an electronic device. The support device has an aligning wall (3) for aligning the module (10) inserted into the support device, and the aligning wall (3) has a length and a transverse extension which runs normal thereto, wherein the support device (1) is designed such that the module (10) inserted into the support device in an intended manner can be moved within the support device (1) in a manner corresponding to or along the transverse extension of the aligning wall (3) between a removal position and a holding position, in which the module (10) is aligned on the aligning wall (3), and the shape or cross-section of the support device (1) forms a removal opening at a distance to the aligning wall (3), said module only being removable from the support device through the removal opening in the removal position.
