Abstract (en)

It is provided a device and system for fixation of light fixture, the device comprises a preloaded spring adapted to create compression against a cut-out, wherein the preloaded spring is comprised of an elongated spring plate. Wherein the spring comprises a first section, the first section comprises means for receiving fasteners, wherein the fasteners are adapted to fasten the first section to a light fixture or parts thereof, and at least a second section extending from the first section. The second section comprises an first support surface, adapted to contact the light fixture or parts thereof, wherein the outer section is preloaded between the fastener of the first section and the first support surface.
