Abstract (en)

[origin: WO2022223897A1] The invention relates to a land vehicle which comprises a bumper frame (AP) comprising an upper edge (BS) having two ends (E), right and left, secured to which are brackets (PF) for attaching optical units (BO) each comprising an upper face (FS), and a front bonnet comprising an inner face which covers, in the closed position, a front compartment (CM) by having a sub-portion extending above the upper edge (BS) and upper faces (FS). Each attachment bracket (PF) comprises a bearing wall (PP) which extends the upper edge (BS) at the corresponding end (E) towards the upper face (FS) of its optical unit (BO). A sealing gasket (JE) is secured to the sub-portion of the inner face or to the upper edge (BS), bearing walls (PP) and upper faces (FS), in order to provide the seal in the upper front part (PS) of the front compartment (CM).
