Abstract (en)
[origin: WO202223253A1] The invention relates to a device for holding objects, more particularly driverless transport vehicles, comprising a rack main frame (3) and a pivot arm (4), which can be pivoted relative to the rack main frame (3) about a pivot axis (A) running in a longitudinal direction (X), wherein the pivot arm (4) has a first strut (41) and a second strut (42), which extend at a right angle to the pivot axis (A) and are disposed parallel to each other at an offset in the longitudinal direction (X), and wherein, in the end regions of the struts (41, 42) remote from the pivot axis (A), one cutout (21) each is provided, said cutouts being designed to receive respective fastening shafts (81).
