Abstract (en)
[origin: WO2022223899A1] The present invention relates to a damping system (100) for an item, comprising a rigid support (110) having at least one receiving face (111) extending in a plane, a leaf spring (120) comprising a first end (121) and a second end (122), and first means for attaching the first end (121) to said support (110), said leaf (120) extending along said support (110) along a convex path so that said second end (122) is brought into contact with said receiving face (111) and is capable of moving in said plane when said leaf (120) is compressed and/or relaxed.
