Abstract (en)

[origin: WO202223141A1] The disclosure is directed to a method (100) for fastening a holding part (1) to a cable or tube (10), the holding part (1) comprising a head element (2) to which a wing element (4) is fastened, the wing element (4) consisting of two wings (4a, 4b) which are spaced apart at an angle, the method involving the following steps: placing (110) the holding part (1) on the cable or tube (10) by orienting the wings (4a, 4b) in the direction of the cable or tube (10) in a desired position; applying energy (120) to the wings (4a, 4b) of the holding part (1) by means of an energy source such that the wings (4a, 4b) can be plastically deformed; deforming (130) the wings (4a, 4b) in such a way that they wrap around the cable or tube portion of the cable or tube (10) in the desired position; and cooling (140) the wings (4a, 4b) by means of a coolant. The disclosure is further directed to a corresponding holding part to be fastened to a cable or tube.
