Abstract (en)

[origin: WO2022225479A1] The cooking device according to the present invention comprises a body (G); a cooking compartment (P) located in the body (G), in which the cooking process is carried out; a water tank (H) located on the body (G), which is filled with water for a steam cooking process; a water outlet (H1) located in the water tank (H), in the form of a tube extending outwardly from the water tank (H); a steam generator (S) for the water in the water tank (H) to be converted into steam and transmitted to the cooking compartment (P); a first transmission element (B1) with a circular cross-section, which is connected to the water outlet (H1) on one side and connected to the steam generator (S) on the other side, wherein the water in the water tank (H) exits through the water outlet (H1), passes through the first transmission element (B1) so that it is transmitted to the steam generator (S); a fixing member (H2) in the form of a protrusion located on the water outlet (H1); and an opening (A) located at a lateral edge of the transmission element (B1), on the side of the first transmission element (B1) connecting to the water outlet (B1), so as to extend between the water outlet (B1) and the steam generator (S) to have an angle with an axis parallel to the longitudinal axis (E) passing through the centre of the transmission element (B1), wherein the fixing member (H2) is inserted in the opening (A).
