Abstract (en)
[origin: WO2022224043A1] An instant alert notifier and docking station for preferred use in emergency situations. Preferably, several notifiers and docking station combinations will be located through a building or location. In a preferred use, the user presses a button and pulls the device cover, which causes the instant alert notifier to preferably perform some or all of the following functions (1) snaps a still image of the person removing the notifier, (2) triggers a "code red" alert and/or activates flashing red LEDs on the mounting/docking stations where they are located throughout the building/in all locations and (3) switches from a front to a rear camera operation. Using the notifier, real time, time- and date-stamped video, audio and/or still image scan be captured and uploaded to off-site or on premises law enforcement and first responder devices. The pressing of the button or removal of the notifier from the docking station can also cause the system to stream live video, audio and/or images to the first responders/emergency responders from all of the other notifiers in the building still contained within their corresponding docking stations.
