Abstract (en)
[origin: WO202223396A1] The present invention relates to a battery receiving system (100) for receiving a plurality of battery cells (101, 101-1, 101-2) in an electrically powered vehicle, comprising a receiving housing (103) for receiving the plurality of battery cells (101, 101-1, 101-2); the plurality of battery cells (101, 101-1, 101-2) received in the receiving housing (103), the battery cells (101, 101-1, 101-2) being arranged in a plurality of battery cell rows (105, 105-1, 105-2, 105-3) positioned in parallel to each other, the battery cells (101, 101-1, 101-2) of the battery cell rows (105, 105-1, 105-2, 105-3) running along a longitudinal direction (121); a plurality of electrical connecting elements (111, 111-1), which electrically interconnect each of two battery cells (101, 101-1, 101-2) of the respective battery cell row (105, 105-1, 105-2, 105-3) that are adjacent along the longitudinal direction (121) in order to provide an electrical series connection of the respective battery cell rows (105, 105-1, 105-2, 105-3); and at least one heat shield element (119, 119-1, 119-2) arranged between two battery cells (101, 101-1, 101-2) of the respective battery cell row (105, 105-1, 105-2, 105-3) that are adjacent along the longitudinal direction (121) and designed to provide a heat protection barrier between the two adjacent battery cells (101, 101-1, 101-2) of the respective battery cell row (105, 105-1, 105-2, 105-3).
