Abstract (en)
[origin: WO202223393A1] The invention relates to a method for producing an assembly (1) and to an assembly (1) for distributing data, comprising an input/output device (2) with at least two interfaces (11, 13) for transmitting data between participants (8, 9) connected to the interfaces (11, 13), wherein data cables (3, 4) are provided, via which the respective participant (8, 9) is connected to the interface (11, 13) corresponding to said participant at the completed input/output device (2). The invention is characterized in that a housing of the input/output device (2) is produced in a plastic injection molding method, and in the process a respective end region of the data cable (3, 4) is surrounded by the housing.
