Abstract (en)  
The present invention relates to a modular container (10) that can be erected starting from a single punched element, comprising a bottom panel (1) of a quadrangular shape from whose sides respectively develop a front panel (2), a rear panel (3), a first lateral panel (5) and a second lateral panel (6), wherein the front panel (2) has a front edge (22) from which an extension element (21) protrudes. The modular container (10) comprises a lid panel (4) comprising a transversal band (9) in extension from one side of the lid panel (4). A first tab (14) is formed by means of notch, in correspondence with an edge portion of the front panel (2) and is configured to be rotatable about an axis substantially coinciding with the front edge (22). The lid panel (4) comprises a first lateral band (7) and a second lateral band (8) of trapezoidal shape which extend from opposite sides of the lid panel (4); said first and second lateral bands (7, 8) have respectively a first end flap (71) and a second end flap (81) which are apt to engage respective central portions (51, 61) of the first and second lateral panels (5, 6) in an assembled and closed configuration of the container (10).
