Abstract (en)

[origin: WO2022268550A1] The invention relates to a moulded plastic part with a main body (26) of particle foam and with at least one covering (30), which consists of a material that is harder than the particle foam and has an anchoring portion (34), which is anchored in the main body (26) and completely embedded in the particle foam. The invention provides that the anchoring portion (34) has a compensating portion (64), which extends in a longitudinal direction (62) between two end regions (60) and the length of which, measured between the end regions (60), is variable by means of applying force by moving the end regions (60) in relation to one another.
