Abstract (en)  
[origin: WO2022226566A1] The invention relates to an electric motor-powered furniture drive (1.2) comprising: - at least one electric motor (30); - at least one interface (90) via which the electric motor-powered furniture drive (1.2) can be connected, preferably detachably connected, to a mechanical actuator (1.1); and - at least one identification device (91) for automatically identifying a configuration (K) of the mechanical actuator (1.1), at least regions of the at least one identification device (91) being located on the at least one interface (90) of the electric motor-powered furniture drive (1.2) so that the configuration (K) of the mechanical actuator (1.1) can be identified when the electric motor-powered furniture drive (1.2) is connected to the mechanical actuator (1.1).
