Abstract (en)

[origin: WO2022229565A1] The invention relates to an assembly (100) comprising a packaging (1) for transporting and/or storing radioactive materials as well as a removable handling structure (30) designed to be coupled in a removable manner to the first axial end (8a) of a lateral packaging body, the handling structure (30) comprising a support device (32), as well as at least two separate members (40) for handling the packaging. The first end (8a) comprises one or more axial retaining elements (52) for axially retaining the handling structure (30), while the handling structure (30) comprises at least one gripping device (42) comprising a member (46) for axial coupling to the first axial end (8a). Furthermore, in the coupled configuration of the handling structure (30), each axial coupling member (46) is in contact with or axially opposite an axial abutment surface (60) of the axial retaining element (52).
