Abstract (en)

[origin: WO2022228607A1] The invention relates to an electric conductor connection element (10) with a contact part (14) and a contact spring (12) which has a base part (16) that is supported against a counter bearing and a clamping part (20) that can be elastically deflected, is angled relative to the base part, and together with the contact part forms a clamping opening (22) for an electric conductor (24). The invention is characterized in that the base part (16) of the contact spring (12) is releasably held on the contact part (14) in that the base part has two support zones (28, 36) which engage on the contact part (14) from opposite sides in positions at different distances to the clamping part (20).
