Abstract (en)
A lashing system (1) for supporting containers (5, 8, 17) located on top of each other, wherein the lashing system (1) comprising at least an upper lashing element (19) and a lower lashing element (20), wherein the upper lashing element (19) is configured to be connected from an upper end to an upper container (5); the lower lashing element (20) is configured to be connected from an upper end to a lower container (8); at least part of at least one of the at least upper and/or lower lashing elements (19, 20) is flexible; and the at least one of the at least upper and/or lower lashing elements (19, 20) is configured to stretch lengthwise more than the other one of the at least upper and/or lower lashing elements (19, 20) when the lashing system (1) is in a tension position. Also a method is disclosed.
