Abstract (en)

Objects are to provide a high strength steel sheet having a TS of 1320 MPa or more and a YR of 85% or more and having a wide range of appropriate clearances not leading to delayed fracture; and to provide a method for manufacturing the same. A high strength steel sheet includes a specific microstructure having a specific chemical composition and satisfying the formulas (1) and (2) defined below: $KAMS/KAMC < 1.00$ wherein KAM (S) is a KAM (Kernel average misorientation) value of a superficial portion of the steel sheet, and KAM (C) is a KAM value of a central portion of the steel sheet, $HvQ-HvS \geq 8$ wherein Hv (Q) indicates the hardness of a portion at 1/4 sheet thickness and Hv (S) indicates the hardness of a superficial portion of the steel sheet.
