Abstract (en)

A method performed by a base station in a wireless communication system, the method including: receiving, from a terminal, capability information including information on a number of reception beams for switching of the reception beams; transmitting, to the terminal via a radio resource control, RRC, signaling, configuration information configuring a non-zero power, NZP, channel state information-reference signal, CSI-RS, resource; and transmitting, to the terminal, a NZP CSI-RS on the CSI-RS resource based on the configuration information, wherein the configuration information includes: repetition information indicating that a plurality of the NZP CSI-RSs are transmitted on resources with a same transmit beam of the base station; resource information including information on a resource mapping pattern indicating at least one of a start symbol within a resource block or a frequency resource; and information on a periodicity, in case that the resources for the plurality of NZP CSI-RSs are periodic.
