Abstract (en)
[origin: WO2022233354A1] The invention relates to a method and a device for operating an opening drive for a motor-vehicle lock, in particular motor-vehicle door lock. Also provided is a locking mechanism (1, 2) which consists substantially of a rotary latch (1) and a pawl (2). Further, a sensor (7) associated with the rotary latch (1) is provided, as well as a drive unit (3, 4, 5, 6) that indirectly or directly acts upon the pawl (2), the drive unit (3, 4, 5, 6) being controlled according to signals of the sensor (7). According to the invention, the sensor (7) produces a signal only once the rotary latch (1) can be freely opened.
