Abstract (en)

[origin: WO2022233366A1] The invention relates to a motor-vehicle lock, in particular electric lock, which is equipped with a locking mechanism (1, 2) made up substantially of a rotary latch (1) and a pawl (2). The lock further comprises an electromotive opening drive (3) for the locking mechanism (1, 2) and an energy storage unit (4) for emergency supply of the opening drive (3) with current and thus for emergency opening of the locking mechanism (1, 2) in the emergency operating mode. According to the invention, the locking mechanism (1, 2) is maintained in the "open" state in the emergency operating mode or following an opening operation, by means of the opening drive (3).
